

Welcome to **your future.**

Bringing together the best minds in network technology, Kelly Telecom offers a comprehensive solution that designs, deploys and delivers private 5G networks for every kind of enterprise.

What do you want your private 5G network to be capable of?

From schools to farms to factories, our experts have the knowledge and technology to keep your operation humming, your information secure and your 5G network unimpeded. Get the most out of your people and your equipment by keeping them seamlessly connected on a private network you own. This can digitally optimize your operations and your future by providing resiliency and complete control over a reliable network that Kelly delivers from end-to-end. To put it simply: this changes everything.

Table of Contents

03 Agriculture

Establish precision operations across any number of agricultural fields with a network that reduces costs, increases yields and seamlessly integrates and connects every next generation sensor and machine.

04 Education

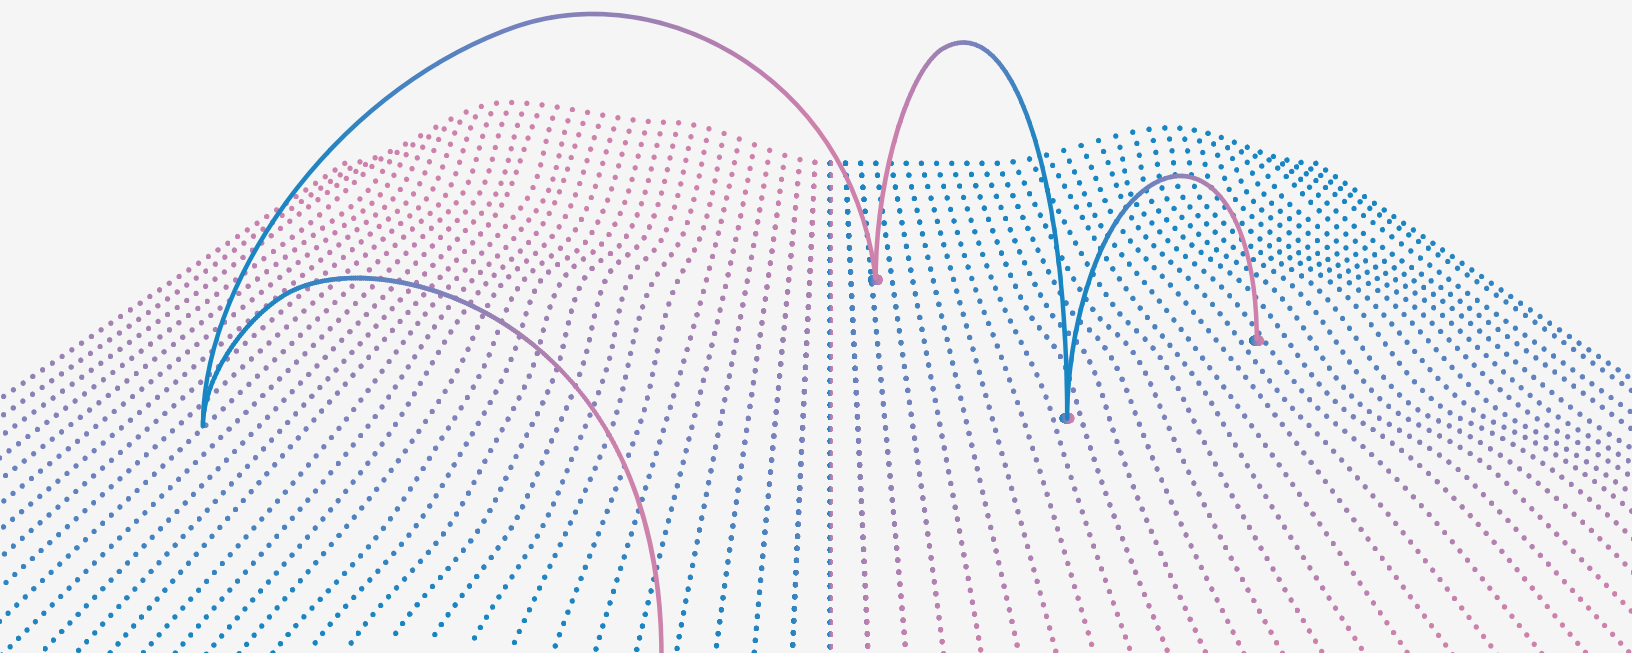

Effortlessly connect school districts and campuses with a private 5G network providing security, a next generation learning environment and unparalleled reliability.

05 Manufacturing

With your own secure 5G network, institute advanced manufacturing, optimize equipment effectiveness, and digitally transform your maintenance and automation.

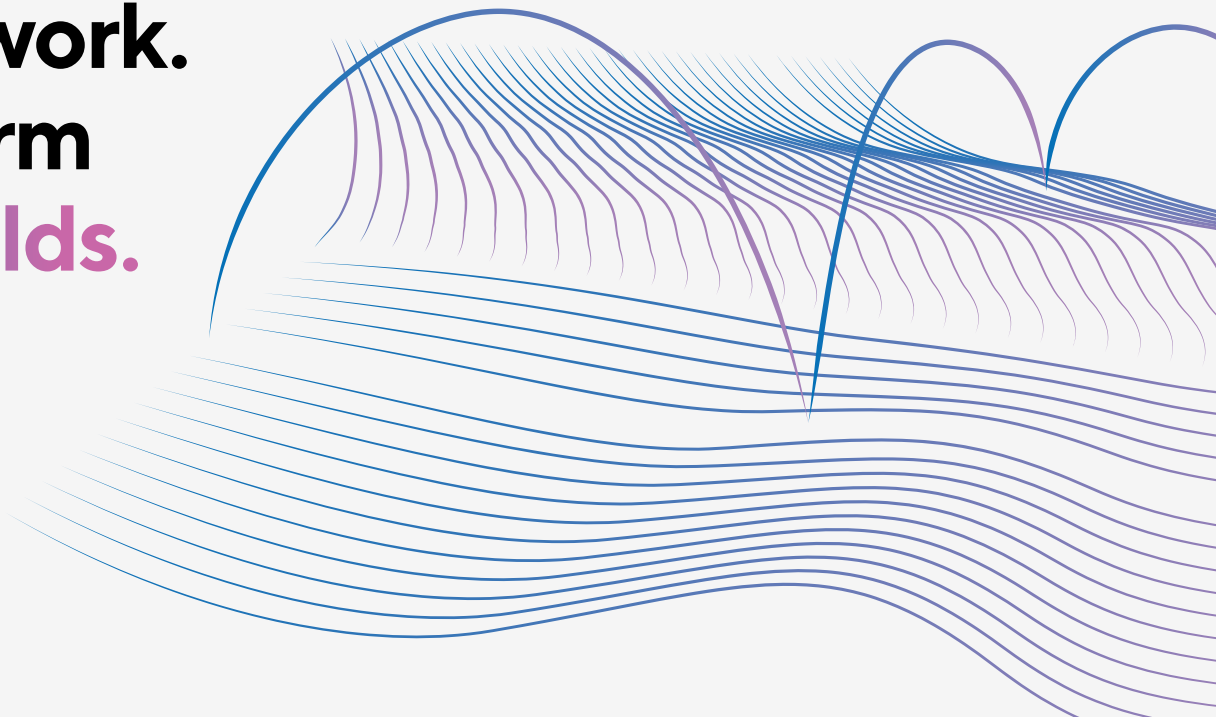

06 Energy

With control and flexibility, a foundational wireless network provides grid modernization and digital transformation.

Own your 5G network. Transform your yields.

Establish precision operations across any number of agricultural fields with a network that reduces costs, increases yields and seamlessly integrates and connects every next generation sensor and machine.

Every aspect of your agriculture operations can receive an instant uptick in innovation. Having reliable and secure connectivity between people and things is already the expectation. After all, modern agriculture is built on sensors, equipment, and the network that supports it all. But now you can own that network, taking control of it to better serve your business.

With decades of expertise, only Kelly can design, deploy and deliver flawless 5G across a wide area, with high throughput and low latency. Creating a private, centralized system that can reach every piece of equipment – no matter how remote – gives you complete control of your entire operation. And with that control comes security over all your information.

This is the future of agriculture.

Welcome to your future.

Your own secure, private 5G network: **A+**

Effortlessly connect school districts and campuses with a private 5G network providing security, a next generation learning environment and unparalleled reliability.

Students, teachers and parents require a secure, reliable network to keep them connected to their school districts and campuses, and keep their personal information safe. Whether that connectivity enhances everyone's ability for virtual learning, or becomes the foundation for easy, fast communication, owning your own network and providing it to every member of your educational community is how to create a resilient education network.

With decades of expertise, only Kelly can design, deploy and deliver seamless 5G for these next generation learning environments. By providing the technology to keep up with the evolving definition of the "classroom," the connectivity gap can begin to close and no child will be left behind. All levels of education, from K-12 to post-secondary, can innovate with school-owned networks and provide a student-by-student educational experience.

This is the future of education.

Welcome to your future.

Own your 5G network. Accelerate your growth.

With your own secure 5G network, institute advanced manufacturing, optimize equipment effectiveness, and digitally transform your maintenance and automation.

If you're manufacturing and not innovating, you're not reaching your company's full potential. With your own secure 5G network you can drive automation further, connect more devices, enable better robotics, and keep every last piece of information secure. And with more and more devices working at once, you can have better traffic control despite higher device density, and correct any lapses in operations instantly.

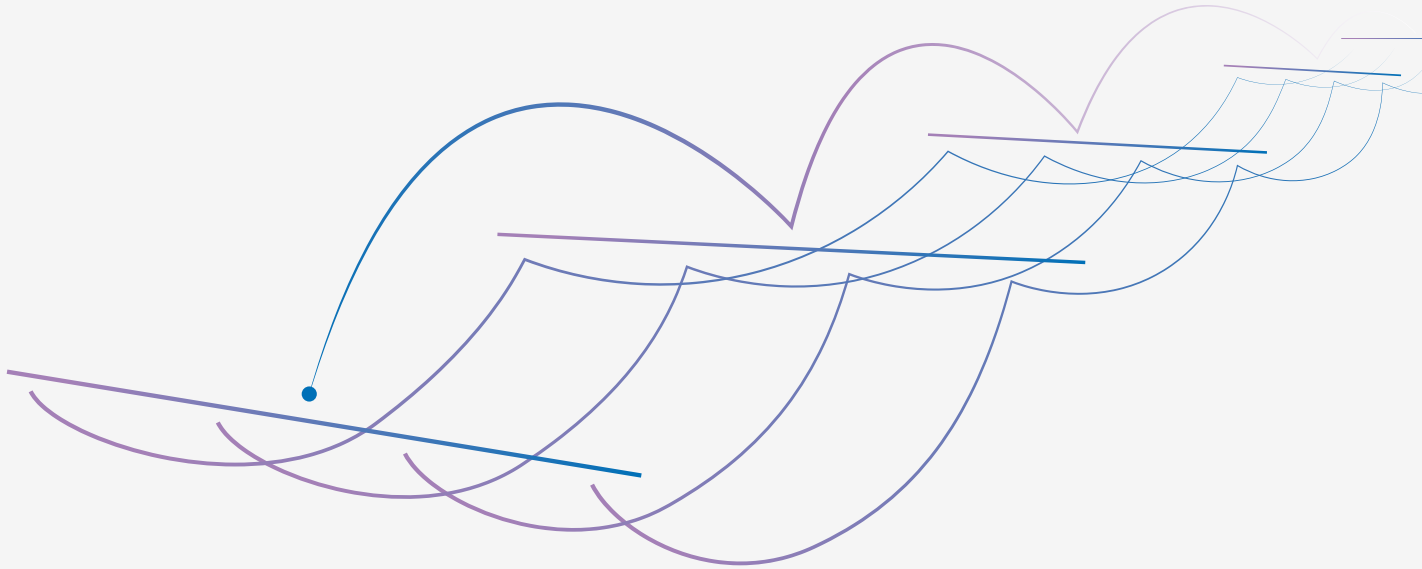

With decades of expertise, only Kelly can design, deploy and deliver reliable, seamless, private 5G that gives you the ideal level of functionality and efficiency. You're in the business of making, and with a network you own, we can make you better.

This is the future of manufacturing.

Welcome to your future.

Grid modernization **is a must.** So is Kelly Telecom.

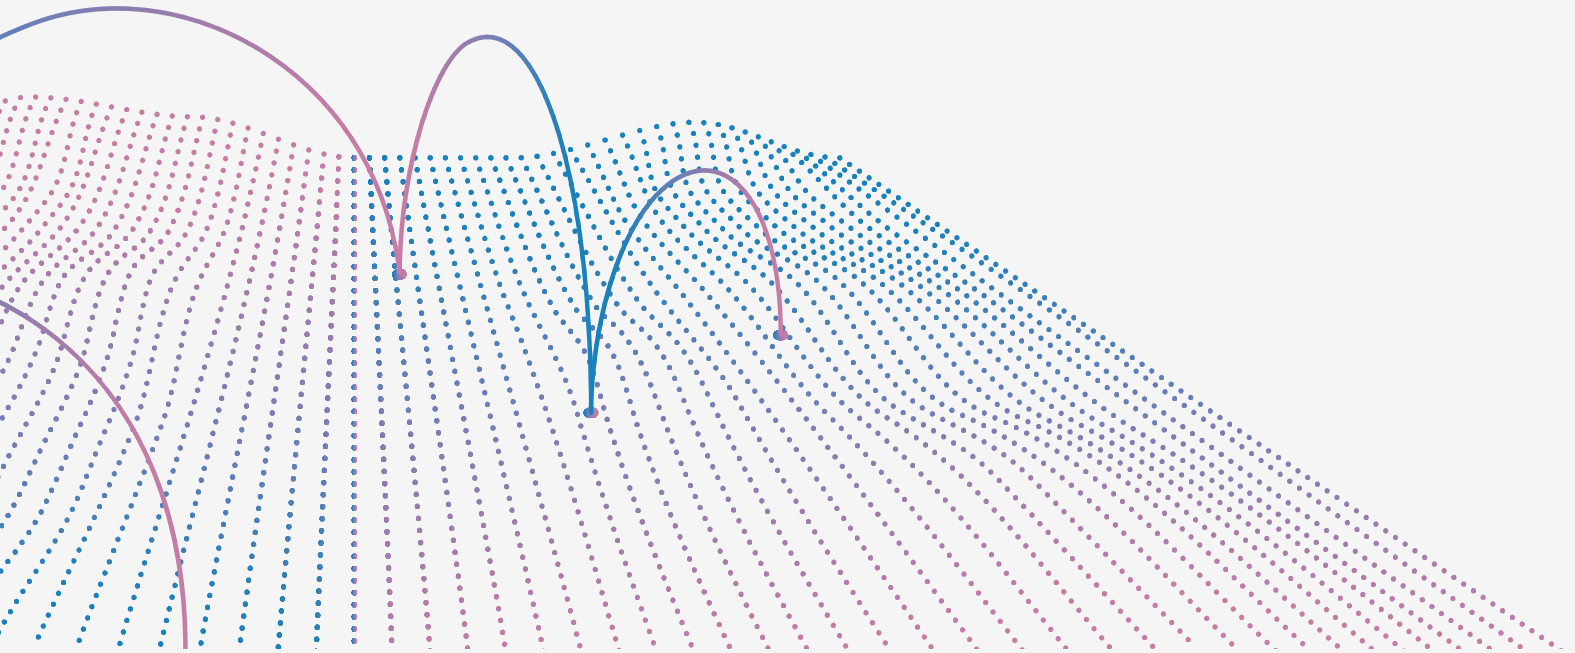

With control and flexibility, a transformational wireless network enables grid modernization and more.

Wind. Solar. Gas. Electric. Microgrid. No matter how vast your operations. No matter how remote your locations. You can have a private, secure 5G network that enables the evolution of your connectivity, modernizes your operations, and covers the expanse of your distribution infrastructure.

With decades of expertise, only Kelly can design, deploy and deliver a reliable, robust infrastructure enabling succeeding technologies that you own, so you can optimize your operations and prepare for the challenges facing the energy sector.

This is the future of energy.

Welcome to your future.
